

What Is Tabular Data?

Tabular data is information written in a table. A table has rows and columns, like a class list at school. Each row is one thing, and each column tells us something about it.

Types of Tabular Data

Imagine a big list, like your class list! That's a table!

Numbers (Numerical Data)

How many apples? **3 apples**! How tall are you? **100 cm**!

Names & Types (Categorical Data)

What color is your toy? **Red** or **Blue**?
Is it **small** or **big**?

Yes or No (Binary Data)

Is the light on? **Yes** or **No**?

More Types of Data in Tables

Tables can hold even more fun things!

Words (Text Data)

Like a little message: "I like ice cream".

Time (Date or Time)

What's today's date? When is your birthday?

Special Table Data

Sometimes tables have secret numbers or empty spots!

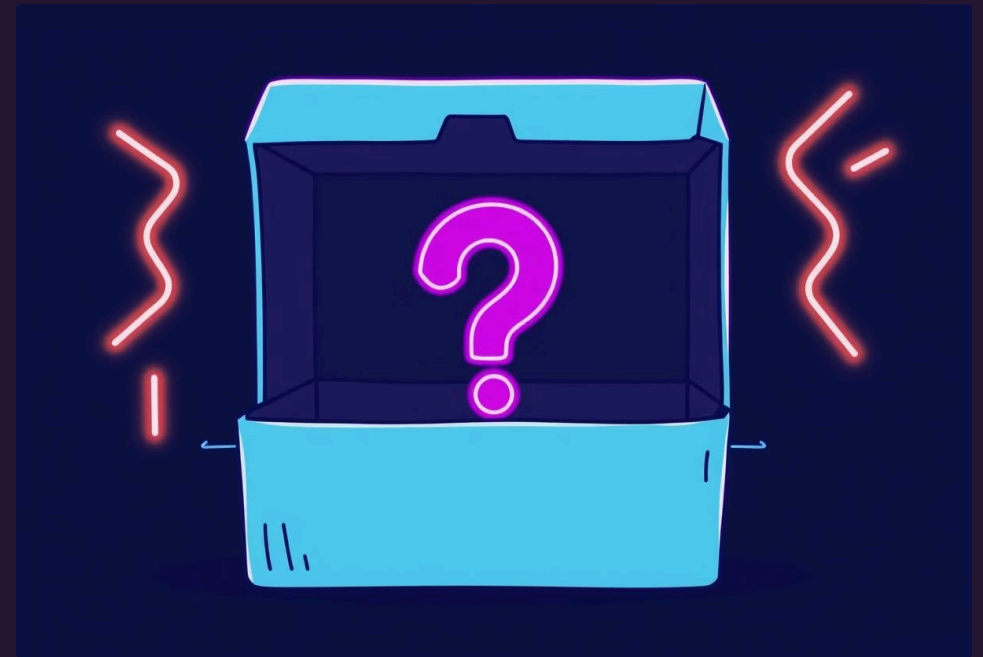

ID Numbers (Identifier Data)

Like your **student number** on your school card!

Missing Data (Null data)

An **empty box** when we don't know something yet.

All of these can live together in one table.

Any Questions?

What fun new things did you discover today about tabular data?

Thank you!
